

Penis Improver - Penis Enlargement System

A Manual Guide To Permanent and Safe Enhanced Sexual Performance.

LEGAL NOTICE: Nothing in this manual is meant as, or should be taken as medical advice. While the techniques described in this manual have worked well for many men including the author, we are all individuals and they may not be appropriate for you. Before trying any of the techniques in this manual you should consult with a licensed Physician and/or Sex Therapist. If you are interested in penis enlargement you should consult a licensed Physician and/or Urologist. Because no two people are alike and you may have special needs, all penis enlargement techniques should be done under the supervision of a licensed Physician or Urologist. This manual is meant for informational purposes only. Neither the Penis Improver developers nor the author shall be liable or responsible for any loss, damage, injury or ailment caused or alleged to be caused, directly or indirectly by the information or lack of information, or use or misuse of the methods or techniques described in this manual.

Introduction

Congratulations on your purchase of The Penis Improver - Penis Enlargement System Manual. In this manual you will learn about your penis, you will learn how to make it harder, longer and thicker and even more important as many women will attest, How To Use It! I will show you how to banish premature ejaculation forever. You will learn the most ancient and the latest techniques for to gain true mastery of your penis. Before long you will have the sexual prowess of a porno stud! There is one catch. Like anything else in life, to become a master it takes work, dedication and consistency. I mean you would not expect to walk into a Dojo (Martial Arts Studio) and come out with a black belt the same day, or be able to do the splits after stretching only once. Would go to the gym and come out looking like a bodybuilder after only a few workouts would you? Of course not! The same truth applies here as well. And the same attitude is required as well. You can make significant gains in size, staying power and technique but it will require dedication and a commitment on your part. A commitment on your part to follow the techniques taught to you in this manual on a regular basis. The reason I use the analogy above is that it is quite appropriate, as we will be practicing techniques like they do in the martial arts. In fact many of the techniques you will be learning were taught in ancient Asia by the Taoist (pronounced Dao-ist) as sexual Kung Fu. We will also be stretching tendons and ligaments like they do in the martial arts and like a bodybuilder we will be building muscle as well. So

enough said let's get down to business! The Business of building a Big, Hard, Strong, Penis. And becoming the master of your sexual destiny.

Health & Nutrition

Your penis is not a separate entity from your body. It is part of your body. So if you are in poor health you should not expect your penis to be in any better health than the rest of your body. If you are under great stress, deprived of quality sleep and rest, suffering from an illness or are just malnourished due to a nutritionally deficient diet, you may lack the penis performance that you desire. But all is not lost as in the next few pages we will cover the basics of nutrition as well as foods and supplement that specifically enhance sexual performance.

High Octane Sexual Fuel Diet

The food you put into your body is what your body burns as fuel to make energy and just like when you put cheap gas in your car and you get poor performance the same goes for your body. The quality of food you eat can be a major factor that helps to determine your energy level, general health and sexual performance. What should you eat? You might ask? You should eat a well balanced diet with plenty of fresh fruits (apples, bananas, peaches, pears, grapes, oranges etc.) and vegetables (spinach, broccoli, asparagus, squash, green beans, carrots, etc... green and leafy vegetables are the best!) If you don't like to eat vegetables you can drink fresh vegetable juice, not canned. When a product is canned it loses many of its vitamins, nutrients and enzymes, so you should always try to eat fresh foods. You should also eat a high quality protein every day, such as fish, chicken, and egg whites. I believe that beef meat should be eating only 1-4 times a month. If you really like red meat, you might try ostrich or buffalo; they are much leaner and healthier. When you buy your food you should try to get as much of it organic (grown with out pesticides and without preservatives) as possible. I recommend that you get a copy of the Zone Diet book. It basically says that you should eat 30% Fat (good fat, avocados, nuts, etc.) 30% Carbohydrates (in the form of non-starchy vegetables) and 40% Protein (Fish, Chicken, Etc.) at every meal and that you should avoid refined sugar. What you should you not eat? Refined sugar (candy, soft drinks, pastries, white sugar, brown sugar, etc.) Preservatives (Sodium Benzoate, Sodium Nitrate, Sodium Ethoborate etc.) Food Additives (MSG or Mono-Sodiumglutinate, NutraSweet or Aspartame, hydrolyzed animal or vegetable protein these are excitotoxins and stimulate the neurons in the brain until they die! Food Dyes, etc.) Start reading the packages of what you eat. Look for the hidden sugars (sugar, high-fructose corn syrup, maltodextrin), preservatives and food additives on the labels of what you buy. A good rule of thumb is if you can't pronounce it you might not want to eat it. Try to eat little processed food as possible. Processed food are ready-made food. Such as canned foods and processed cheese, frozen dinners etc. I don't expect anyone to forgo all of the above all of the time. I love a good piece of Triple Chocolate Cake or Chocolate Cookies, but I don't eat it everyday! Better yet save up you chocolate allowance and put chocolate syrup on your woman's nipples! One more note before we move on. Two things that you should also avoid are aluminum and fluoride, which is a by-product of aluminum and used as rat poison. Aluminum has been linked to Alzheimer's Disease. You might ask how you avoid aluminum? Don't drink out of aluminum cans, or cook in aluminum pots and pans. Go get you're deodorant right now, and read the label, if it says aluminum don't use it anymore. And as for fluoride, from what I have read from some dentist that have written on the subject, IT DOES NOTHING FOR YOUR TEETH! And is aluminum by product.

Supercharging Supplements

In addition to healthy foods you can take vitamin and mineral supplements to help make up for what our foods lack today. I recommend that you see a nutritionist or buy a book on the subject of nutrition. Until you do I will tell you what I take. Colloidal Minerals, B-Stress Complex, Vitamins C, E, A and Zinc which is very important for prostate health and in fighting off infections. Many companies are now making zinc lozenges, because if you get enough at the on set of a cold you could be over the cold in 24-48 hours or at least have less severe symptoms. And now for the sexual performance boosting supplements: ? B-Stress Complex for more energy ? B-12 For more energy ? Colloidal Minerals for general health and immunity ? Amino Acid: L-Arginine: for erections of steel and increased volume of ejaculate. I found this one through an obscure magazine article about a year ago. It Works! I take 500-1000mg in the daytime and 1000-1500mg about an hour or two before sex. Warning: Do not take L-Arginine during a herpes break out or when cold sores are present, or any herpes related disease as it will make the case more severe. I also recommend that you take good a amino acid supplement and augment it with the L-Arginine as not to create an imbalance in the body. I do not recommend taking high dosages on a daily basis for an extended period of time. ? Herb: Avina Sativa (Wild Oats): Increases sex drive and volume of ejaculate. ? Herb: Saw Palmetto Berries Extract: Good for prostate health. ? Herb: Muira Puama Extract: Increases sex drive, and produces firmer erections I have heard. ? Herb: Yohimbe: Some people have had great success with this herb and claim great results. I don't

recommend it, because I have heard that it has negative side effects if over used or used for extended periods of time. ? Herb: Damiana: Increases sex drive. I have also heard that the user of this herb will become more attractive to the opposite sex. ? Herb: Schizandra: It is said to increase the volume of sexual fluids, increase sexual endurance and staying power and to strengthen the whole body. One Added benefit is that it beautifies the skin. ? Herb: Epimedium: Also known as "goat sex herb" considered an aphrodisiac. ? Herbal Formula: Honeymooners Tea: This tea is for replenishing spent sexual energy. Dendrobium, Schizandra, Licorice root. You boil all of the herbs and drink the tea. There are many great Chinese herbal formulas that may benefit you in countless ways. I recommend that you see a Chinese Tonic Herbalist to take advantage of them. Consult your doctor and/or nutritionist before taking any of the supplements or herbs listed here!

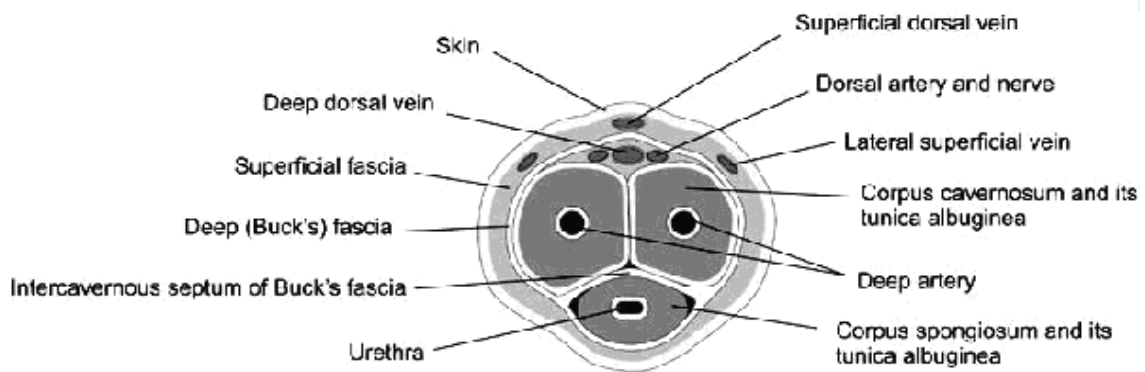

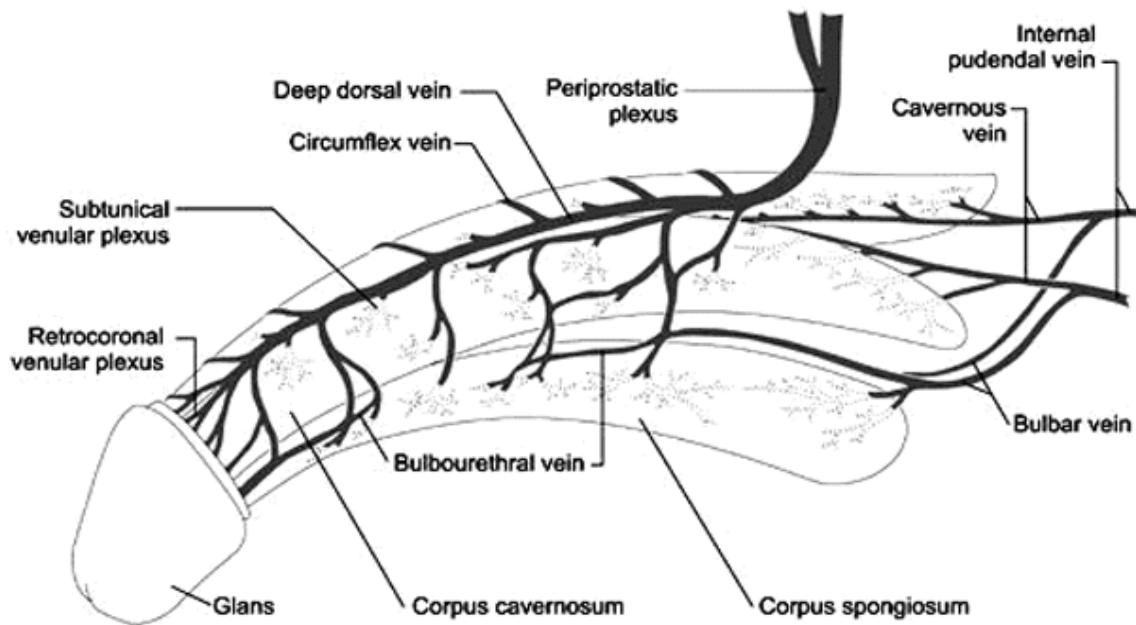

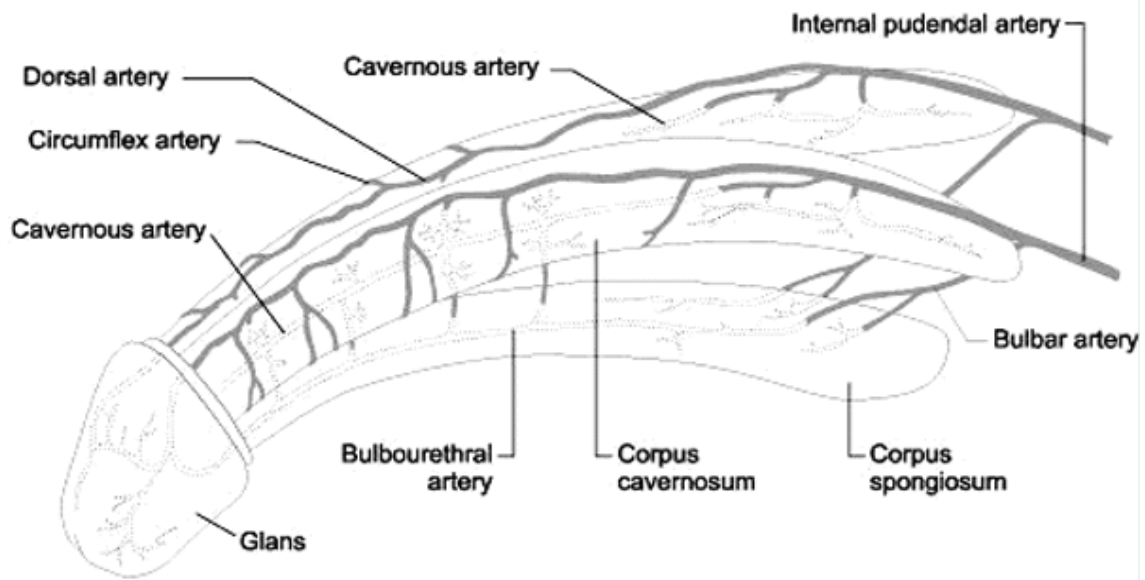

Charging Up Your Batteries

If you want to be a sexual athlete you need to get plenty of rest and sleep so that your batteries are charged up so to speak, So that when you need the Super Sexual Energy it is there. The Ancient Taoist believe that a man should retain his ejaculate when he has his orgasm so that he does not lose his energy and feel drained after sex as many men feel. How ever they believed that men should have sex very often without ejaculating in order to cultivate energy for well being and rejuvenation. Many professional athletes abstain from sex before a competition so that they are at their peak, energy wise; this may lend some creditability to the Taoist theory. Weather I choose to believe in the Taoist theory or not one thing I have learned is that you can have sex all day and sleep all night or have sex all night and sleep all day. But you can't work all day, fight traffic, go to the gym and then have sex all night and get up for work early the next morning and do it all over again for very long with out it taking toll on your health and immunity. The Taoist may have the answer to this problem and we will explore in more depth later on, but for now just realize that you need adequate rest and sleep to have great sex and great erections.

Another Taoist theory is that you tell your health and well being by your penis. According to the theory you can tell when you are in good health and when I you had enough rest by the firmness of your erections. The harder you are the healthier you are and the more energy you have. This is not written in stone, but I have found it to be true for me as the Taoists found it true for them. Drugs and other Hazards As well as all of the other dangers of illegal substances they can also effect you sexual function in a detrimental way. If you want to be a man of steel you have to act like one. Moderation is the key here, but I find that some drugs are too dangerous even with moderate usage, such as cocaine, heroin, and ecstasy have been found to cause brain damage. Many prescription drugs and antibiotics also may cause loss of sex drive to the point of near impotence. If you are on prescription drugs, and this is the case you should consult with your doctor, and a nutritionist and/or herbalist for a solution to your problem. Steroids can be very damaging to your sexual functioning in addition to the possibility of damaging your liver, kidneys and heart. Some of the side effects of steroids to the reproductive system are that you balls may shrink and you testosterone production may be significantly reduced. We all know that smoking Cigarettes is bad for your health. But you may not know what it does to your sexual performance. When you smoke you decrease the blood and oxygen supply in your arteries and you're sexual performance and firmness of your erection decreases. That would be enough right there for me to quit! Alcohol in moderation is not bad, in fact medical studies have now shown that 1 drink a day may even be good for you! We all know that too much alcohol decreases your ability to perform sexually. So once again moderation is the key. Becoming A Man of Steel If you want to be a man of steel and have a penis of steel you have to live like a man of steel. Which means that you need to eat like a man of steel, sleep like a man of steel, exercise like a man of steel. I don't want to turn this into bodybuilding or exercise guide, but I will say that if you are not already active, you should be. I recommend joining a gym (A great place to meet women) and getting on weight training program. This will not only make you feel better, but you will also look better and be more attractive to the opposite sex. If you really can't stand lifting weights, you might try martial arts classes, where not only will you get a work out but you will also learn to defend your self and increase your self -discipline and self-confidence. Other suggestions might include Aerobics, Boxercise, Running, or Biking.

Penis of Steel

Now lets get down to business, and build a penis that is as strong as steel, and as hard as steel. In order to do that we need to first strengthen the muscles that are responsible for your orgasms and ejaculation, the Pubococcygeus muscle or PC muscle (Figure 1).

But first we need to locate it if you are not aware of it. The best way to find it is to urinate and try to stop the flow of urine, when the flow stops you have found your PC muscle. Now flex your PC muscle a few times to make sure you have found it. As with any muscle without use it will atrophy and unless you have been doing a PC muscle workout already on a regular basis you could probably use some strengthening and toning. So now we will start a PC muscle exercise program.

Strong as Steel The Strong as Steel Exercise Program

The first exercise we are going to do is the

Quick squeeze:

Squeeze your PC Muscle as tight as you can and hold it for 2 seconds then completely relax the muscle. That is one rep, wait 1 second between reps. Next is the

Slow Squeeze:

Squeeze your PC Muscle as tight as you can slowly and hold it for 15 seconds then release slowly, completely relax the muscle. That is one rep wait 5 seconds between reps. And last is the

Super Squeeze:

Squeeze your PC Muscle as tight as you can slowly and hold it for a minimum of 60 seconds then release. That is one rep wait 60 seconds between reps.

Daily Program:

Quick Squeeze: 20 reps. (work up to 100 reps.) x 1 set.

Slow Squeeze: 10 reps. (work up to 25 reps.) x 1 set.

Super Squeeze: 1 reps. (work up to 10 reps.) x 1 set.

Just as with any exercise program you should start out slow and build up over time, in this case over about 2-3 weeks to prevent excessive soreness. After being on this program for 4-8 weeks you should have a super strong PC muscle. Which is required for many of the techniques in the following sections. Some of the added benefits of PC muscle exercises are more intense orgasms, stronger and more powerful ejaculation, and the ability to become a Multi-Orgasmic Male. PC muscle exercise also promotes good prostate health, by massaging the prostate gland with the contractions of the PC muscle.

Hard As Steel

There are many different variables that can factor in to the hardness of your penis, such as general health and lack of sleep that we covered in earlier sections. Another factor is the strength of your PC muscle. The stronger your PC muscle is the harder your penis will be, and when your penis is at it's hardest, your penis will also be at it's biggest. Also as mentioned earlier a program of herbs, vitamins and supplements can help turn a weak erection into a Steel Rod! The ones that I have found to be most beneficial to increase the hardness of erections are the Colloidal Minerals, B-Complex, and L-Arginine (The Secret Ingredient, this one alone should make you rock hard if taken correctly and you are in general good health I take 500-2000mg's a day 500-1000mg's in the morning and 500-1500mg's 2 hours before sex. Then get ready for a super hard erection, in some cases increased staying power and a Mega Load Ejaculation. If this does not happen the first time take the dosage for a few days in a row). Lasting All Night Long A penis no matter how big or hard is of very little use to anyone if you have no control over it. Many men suffer from premature ejaculation as we will define it (ejaculating before you are ready to.) This can be a great insecurity to a man's sexual self-image and cause much frustration to his sexual partner as well. Now we will learn some techniques to help end this problem forever!

Identifying The Point of No Return

Before you can control your ejaculation you must be able to recognize when it is that you are going to ejaculate or, as we will call it the point of ejaculatory inevitability or the point of no return(P.O.N.R). In order do this you have to do some exercises so that you will be able to identify your P.O.N.R.

Exercise #1:

Finding your P.O.N.R. and Excitement Scale.

Goal: Finding your P.O.N.R. and Excitement Scale.

Repeat until you accomplish the goal to your satisfaction.. You will want to take about 30 min. to do this. You should do this alone and without any added stimulation (Pornographic Material unless absolutely needed). You should pay attention to every nuance and subtle feeling that you will feel.

1. Start with a limp penis and begin stroking until you are hard. Notice all of the feelings you feel along the way to your P.O.N.R.

2. Give each level of excitement a number between 1-10, 1.5, 3.5, 9.5, etc.(1 being lowest or semi-hard and 10 highest and the P.O.N.R.) along the way to your P.O.N.R.
3. Try to stay at each level for about 2-3 min. Then move to the next.
4. Notice what it is that moves you to the next level i.e. the speed of your stroking, the tightness of your grip, what you are thinking etc.
5. Move slowly to each higher level as to not get carried away and ejaculate with out finding your P.O.N.R.
6. When you get to a level about 9-9.5 pay real close attention to what you are feeling. You should start to feel the seamen moving from the testicles and collecting in the prostate gland at the base of the penis.
7. If possible stop and take a deep breath and feel everything. If you can't stop then you have passed your P.O.N.R.
8. See how close you can get, then let your self ejaculate and enjoy it! Now that you have identified your P.O.N.R. and you can tell when you are approaching your P.O.N.R. all you need is to learn how to slow your path to orgasm which we will cover in the next section.

Delaying Your Orgasm

Now we will cover several techniques in this section that will enable you to Delay and/or prevent your orgasm and prolong lovemaking for as long as you desire. Some of the techniques will work better for you than others and many can and should be used in conjunction with each other.

We will start with the simplest leading to the more advanced with each technique building on the previous.

Delay Techniques:

Breathing This one is fairly simple but very powerful when combined with the other techniques. That is why you are going to learn it first. First we need to see if you know the proper way to breathe. Put your hand on your abdomen and take a deep breath, you should feel your abdomen fill with air and your abdomen expand outward. Your shoulders should not rise. Practice breathing like this until you get it down. When you feel that you are reaching around 7.5 or 8 on the Excitement Scale take a slow deep breath and hold it for a few seconds until the urge to ejaculate subsides. Continue slow deep breathing until your level on the Excitement Scale drops a few points.

Warning: don't hold your breath too long you don't want to get dizzy or pass out! This technique may or may not work for you depending on how close to your P.O.N.R. you are, but is very powerful when used in combination with the following techniques.

STOP !

That's it! Just stop and breathe! (As described above) When you feel that you are getting too close to your point of no return, just stop what ever it is you are doing take a deep breath and just wait 20-60 seconds before you resume any form of stimulation. Once you feel that your arousal has dropped a few points on your excitement scale you then can resume stimulation. The key to making this work is to really stop. If you are with a lover you maybe concerned that you will look silly or deprive her of her pleasure. If you use finesse you will be able apply this technique properly without either of the two happening. The key to doing this is not to let your lover feel isolated during your break. Scenario A: Let's say your lover is going down on you and you are getting close to your P.O.N.R. and you haven't had intercourse yet.

A few ways to handle this are as follows:

1. Say "baby, that feels so good, but I don't want to come yet! Could you stop for a few seconds!" Most women would be very happy to help you out, especially if your are with a steady lover.
2. Say " Ohh, God you are so good!, Come here!" and pull her up, take a deep breath and kiss her passionately during the 30 seconds or so..This will only turn her on more and still give the break you needed..Then you can gently guide her back down there or move on to another activity. If you need even more of break you could suck on her nipples or go down her..
3. Pull her up and say " My Turn!" and go down on her while you take your needed break. Very few women will argue with this request!

Scenario B: You are having intercourse and you can tell that it won't be long before you reach your P.O.N.R. A few ways to handle this are as follows:

1. Say "baby, Your pussy feels so good, but I don't want to come yet!" Stop, Pull out, take a slow deep breath (If just stopping without pulling out works for you then great, but many times it won't be enough, also she my keep moving especially if she is on top) and take a break. Most women are very happy to help you out, especially if your are with a steady lover. WARNING: If your lover is screaming "Don't stop I'm about to come", this is not the time for this technique, even if you want to last past her orgasm.

2. Stop, take a deep breath and, change positions. This will only work if you have been in one position for awhile. Also the best position to move to is her favorite, unless this was it! Then you might not want to change.
3. Pull out, take a deep breath, tell her how pretty her pussy is or how much you love her pussy, go down and kiss her or her pussy a few times, while you take a break.
4. Pull out, take deep breath, slide the shaft of your penis over her clitoris with a thrusting motion, and rub her clitoris with the head of your penis and/or playfully slap and tease her pussy with your penis, while you say something like "You like being naughty don't you, I love your naughty little pussy!" or some other verbiage that you come up with.. Be creative.

Exercise #2:

Solo Practice - The Breathing and Stop! Techniques.

Goal: Experiencing and becoming familiar with the Stop! and Breathing Techniques.

Repeat until you can confidently and successfully apply the technique to delay your ejaculation and prolong sexual stimulation. You will want to take about 45min. to do this. You should do this alone and without any added stimulation (Pornographic Material unless absolutely needed). You should pay attention to every nuance and subtle feeling that you will feel.

1. Start with a limp penis and begin stroking until you are hard. Notice all of the feelings you feel along the way to your P.O.N.R.
2. Give each level of excitement a number between 1-10, 1.5, 3.5, 9.5, etc.(1 being lowest or semi-hard and 10 highest and the P.O.N.R.) along the way to your P.O.N.R.
3. Try to stay at each level for about 2-3 min. Then move to the next.
4. Notice what it is that moves you to the next level i.e. the speed of your stroking, the tightness of your grip, what you are thinking etc.
5. Move slowly to each higher level as to not get carried away and ejaculate with out trying the technique.
6. When you get to a level of about 6.5 apply the technique: Stop, Take your hand off of your penis, take a deep breath and hold for a few seconds, slowly let the breath out and relax as your Excitement level drops a few point on the scale. Pay very close attention to what you are feeling as this happens. Start stimulating you're self again and repeat the above technique at levels 7.5, 8.5, 9.5.
7. See how close you can get each time, then let your self ejaculate and enjoy it!

The Squeeze

The Squeeze technique is just what it sounds like you Squeeze your penis with your hand.

When feel like you are getting near your P.O.N.R. you do The Squeeze in combination with the previous Breathing and Stop! Methods.

The Squeeze Technique:

1. When you feel close to your P.O.N.R. you, stop, pull out, take a deep breath and squeeze your penis hard with your thumb and first two fingers for several seconds. After your Excitement level drops a few points you may resume intercourse. The squeeze should be applied either with the first two fingers (this is a flat grip the fingers and thumb do not meet.) just below the head of the penis.
2. Another variation is to squeeze you penis at the base instead of just below. This can be done in the same manner described above or by gripping the penis in a ring manner with the thumb and index finger. Try both and see which works best for you. You may also be able to use the last variation of griping the penis at the base without having to pull out, and simply just stopping, taking a deep breath and applying the squeeze to the base of the penis and waiting till the urge to ejaculate subsides.

Exercise #3:

Solo Practice - The Squeeze Technique.

Goal: Experiencing and becoming familiar with the Stop!, Breathing and Squeeze Techniques. Repeat until you can confidently and successfully apply the technique to delay your ejaculation and prolong sexual stimulation. You will want to take about 45min. to do this.

1. You should do this alone and without any added stimulation (Pornographic Material unless absolutely needed). You should pay attention to every nuance and subtle feeling that you will feel.
2. Start with a limp penis and begin stroking until you are hard. Notice all of the feelings you feel along the way to your P.O.N.R.
3. Give each level of excitement a number between 1-10, 1.5, 3.5, 9.5, etc.(1 being lowest or semi-hard and 10 highest and the P.O.N.R.) along the way to your P.O.N.R.
4. Try to stay at each level for about 2-3 min. Then move to the next.

5. Notice what it is that moves you to the next level i.e. the speed of your stroking, the tightness of your grip, what you are thinking etc.
6. Move slowly to each higher level as to not get carried away and ejaculate without trying the technique.
7. When you get to a level of about 6.5 apply the technique: Stop, squeeze your penis hard with your thumb and forefingers just below the head or with the ring grip at the base of the penis(I recommend that you try both variations and see which one works best for you), take a deep breath and hold for a few seconds, slowly let the breath out and relax as your Excitement level drops a few point on the scale. Pay very close attention to what you are feeling as this happens. Start stimulating you're self again and repeat the above technique at levels 7.5, 8.5, 9.5. 8. See how close you can get each time, then let your self ejaculate and enjoy it!

The PG Pump

The PG Pump is actually an ancient Taoist technique to delay ejaculation and can also be used during orgasm do prevent ejaculation.

To use the PG Pump you must first find your external prostate point. The point is located on the perineum between your scrotum and anus, but closer to your anus (Figure 1). The PG Pump technique can be applied with or without pulling out, however the effect is greater if you do pullout.

Exercise #4:

Finding your External PG Point. Goal: To Find your External PG Point and become familiar with the sensation of pumping it.

1. Stimulate your self until highly aroused highly.
2. You should be standing or in a kneeling position. Reach around behind your butt and between your legs, then with your first two or three fingers (depending on the size of your fingers) and press up on the area above your scrotum and just below your anus fairly hard up to the first joint of your fingers.
3. When you find the right spot you will feel a pleasurable sensation and you will be able to see the head of your penis throb and expand as you press.
4. Press it a few times slowly and gently.

Now you know how to pump your prostate.

Now that you know where your External PG point is and how to pump your Prostate lets apply this technique to practical use.

Exercise #5:

Solo Practice - The PG Pump Technique.

Goal: Experiencing and becoming familiar with the Stop!, Breathing and PG Pump Techniques.

Repeat until you can confidently and successfully apply the technique to delay your ejaculation and prolong sexual stimulation. You will want to take about 45min. to do this. You should do this alone and without any added stimulation (Pornographic Material unless absolutely needed). You should pay attention to every nuance and subtle feeling that you will feel.

1. Start with a limp penis and begin stroking until you are hard. Notice all of the feelings you feel along the way to your P.O.N.R.
2. Give each level of excitement a number between 1-10, 1.5, 3.5, 9.5, etc.(1 being lowest or semi-hard and 10 highest and the P.O.N.R.) along the way to your P.O.N.R.
3. Try to stay at each level for about 2-3 min. Then move to the next.
4. Notice what it is that moves you to the next level i.e. the speed of your stroking, the tightness of your grip, what you are thinking etc.
5. Move slowly to each higher level as to not get carried away and ejaculate without trying the technique.
6. When you get to a level of about 6.5 apply the technique: Stop, press hard on your PG Point for several seconds, release (that is one pump). Pump your PG Point 3-5 times, take a deep breath and hold for a few seconds, slowly let the breath out and relax as your Excitement level drops a few points on the scale. Your erection may decrease a bit as well. Pay very close attention to what you are feeling as this happens. Start stimulating you're self again and repeat the above technique at levels 7.5, 8.5, 9.5.
7. See how close you can get each time, then let your self ejaculate and enjoy it!

The PC Pump

The PC Pump is a internal and more powerful version of the PG Pump, but instead of using you fingers to press on your external prostate point and pump your prostate gland you are using Pubococcygeus muscle or PC muscle to pump the prostate gland.

To explain how this delays ejaculation we first need to understand how ejaculation occurs.

When you near you're P.O.N.R. your prostate starts to fill with prostatic fluid and fluid from the seminal vesicles. Once you reach your P.O.N.R. semen is drawn from your testicles into the prostate gland and then expelled with force by the contractions of the muscles that surround the prostate gland. With the PC Pump and the PG Pump what is actually happening is that you are interrupting this process and restarting it in effect. To be able to do the PC Pump you must have a very strong PC muscle. If you have been doing some kind of PC muscle conditioning might want to try the exercise now, if not you should start training and strengthening your PC muscle with the Strong as Steel Exercise Program as outlined earlier in this manual.

After a couple of weeks of training you should do try this exercise. Remember that you should continue the Strong as Steel Exercise Program indefinitely to maintain a strong PC Muscle. As with the PG Pump, The PC Pump can be applied with or without pulling out.

Exercise #6:

Solo Practice - The PC Pump Technique.

Goal: Experiencing and becoming familiar with the Stop!, Breathing and PC Pump Techniques.

Repeat until you can confidently and successfully apply the technique to delay your ejaculation and prolong sexual stimulation. You will want to take about 45min. to do this. You should do this alone and without any added stimulation (Pornographic Material unless absolutely needed). You should pay attention to every nuance and subtle feeling that you will feel.

1. Start with a limp penis and begin stroking until you are hard. Notice all of the feelings you feel along the way to your P.O.N.R.
2. Give each level of excitement a number between 1-10, 1.5, 3.5, 9.5, etc.(1 being lowest or semi-hard and 10 highest and the P.O.N.R.) along the way to your P.O.N.R.
3. Try to stay at each level for about 2-3 min. Then move to the next.
4. Notice what it is that moves you to the next level i.e. the speed of your stroking, the tightness of your grip, what you are thinking etc.
5. Move slowly to each higher level as to not get carried away and ejaculate without trying the technique.
6. When you get to a level of about 6.5 it is time to apply the PC Pump: There are several variations of the PC Pump technique, try them all and see which one works best for you. A. Stop, Flex your PC hard for 2-3 seconds, release (that is one pump). Pump your PC Muscle 3-5 times, take a deep breath as you do the first pump and hold for a few seconds, slowly let the breath out and relax as your Excitement level drops a few points on the scale. You may also experience a decrease in your erection. Resume stimulation. B. Stop, Flex your PC Muscle hard for one long pump about 10 seconds, release. Pump your PC Muscle 1-3 times, take a deep breath as you do the first pump and hold for a few seconds, slowly let the breath out and relax as your Excitement level drops a few points on the scale. You may also experience a decrease in your erection. Resume stimulation. C. Stop, Flex your PC Muscle hard for 1 second release and do it again quickly, repeat for 5 reps., take a deep breath and hold for a few seconds, slowly let the breath out and relax as your Excitement level drops a few points on the scale. You may also experience a decrease in your erection. Resume stimulation.
7. Pay very close attention to what you are feeling as this happens. Start stimulating you're self again and repeat the above technique at levels 7.5, 8.5, 9.5.
8. See how close you can get each time, then let your self ejaculate and enjoy it!

Focus Control

These techniques are more mental than physical and since the mind is the greatest sex organ these techniques are very powerful when combined with the ones above. These techniques work by you directing your attention away from your orgasm and onto other sensations, and at the same time keep you fully present in the sexual experience.

Change your focus of goal:

This is the easiest of them, this is more an attitude than a specific technique. Change your focus and goal from having an orgasm and ejaculation to enjoying and taking in the whole sexual experience. the smell of her hair.. The feel of her skin, the way she tastes.etc.By taking the focus off of ejaculation and putting it on the whole experience, everything you do does not lead to ejaculating, but to enjoying.

Exercise #7:

Solo Practice - Change your focus of goal.

Goal: Experiencing and becoming familiar The Focus Control Techniques

1. You will want to take about 45min. to do this. You should do this alone and without any added stimulation (Pornographic Material unless absolutely needed). You should pay attention to every nuance and subtle feeling that you will feel.

2. This time you are going to self-stimulate with the goal be pleasure, instead of ejaculation you do not even have to ejaculate at all. Start with a limp penis and begin stroking until you are hard. Notice all of the feelings you feel along the way to your P.O.N.R.
3. Enjoy it! Change your focus of physical sensation: In this one what you do is to take you attention off of your genitals and place them on another part of your body.

Exercise #8:

Change your focus of physical sensation.

Goal: Changing your focus off of your genitals and put it on some other part of your body.

Repeat until you accomplish the goal to your satisfaction.. You will want to take about 30 min. to do this. You should do this alone and without any added stimulation (Pornographic Material unless absolutely needed). You should pay attention to every nuance and subtle feeling that you will feel.

1. Once again let pleasure be your goal, instead of ejaculation. Start with a limp penis and begin stroking until you are hard. Notice all of the feelings you feel along the way to your P.O.N.R.
2. Give each level of excitement a number between 1-10, 1.5, 3.5, 9.5, etc.(1 being lowest or semi-hard and 10 highest and the P.O.N.R.) along the way to your P.O.N.R.
3. Try to stay at each level for about 2-3 min. Then move to the next.
4. Notice what it is that moves you to the next level i.e. the speed of your stroking, the tightness of your grip, what you are thinking etc.
5. Move slowly to each higher level as to not get carried away and ejaculate with out finding your P.O.N.R.
6. When you get to a level about 6.5, shift you attention from what you are feeling in your genitals to what the rest of your body is feeling. Feel what your hands feel, feel what your skin feels.
7. If possible stop and take a deep breath and feel everything.
8. See how close you can get, then let your self ejaculate and enjoy it!

Change your focus on the external stimuli of your lover:

Many times what drives you past the point of no return is not just something that you are feeling but also what you are seeing and hearing and what your focus is on. For instance maybe you can last without a problem until you lover starts to moan and scream, and when your hear how excited she is it throws you past the your P.O.N.R. Or maybe it's when you see her beautiful full breasts hanging down while you are thrusting into her from behind or any number of things. The point is to identify what it is that drives you past your P.O.N.R. and then change you focus to something else about your lover. Many men change their focus to sport scores or something that turns them off, I personally don't think that you should think of something that you find distasteful or negative to delay your ejaculation as you may accidentally create an association between the two. If you feel that this form of detachment may help you, change your focus to anything pleasant that is non-sexual in nature instead. However, I feel that it is better not to remove yourself from your present sexual experience with your lover. It would be preferable to change your focus to how much you love or care about her, how beautiful she looks, how amazing the experience is, take in the whole experience the ambiance, the mood, feel the sheets etc. Just change you focus to anything that is present except the stimulus that drives you over the edge.

Exercise #9:

Change your focus on the external stimuli of your lover

Goal: Changing your focus off of the part of her or the experience that drives you over the edge and on to something else.

Repeat until you accomplish the goal to your satisfaction..

1. Once again let pleasure be your goal, instead of ejaculation.
2. Notice what it is that moves you up the scale. I.e. looking at her breast bounce, watching your penis sliding in and out of her, the way her ass looks, hearing her moan or what she is saying to you.
3. When you start getting close to your P.O.N.R. change your focus off of whatever it is that is driving you wild and on to something else. i.e. if you are watch her breast and it's driving you wild, look into her eyes instead, if you are doing it from behind and her ass is just too much for you look at the wall for a while
4. Apply one of the other techniques that you learned earlier, like The PG Pump or the PC Pump, both of which can be done without pulling out.
5. See how close you can get, then let your self ejaculate and enjoy it!

A Final Word on the Above Techniques With all of the above techniques you don't want to wait until you are at your P.O.N.R. before you start to use them. But rather use them along the way to your P.O.N.R. so that you may last as long as you desire and reach your P.O.N.R. and enjoy your orgasm when you are ready rather than to be at the

mercy of chance or to just put up with premature ejaculation. You may never have to hear again the words "I was almost there, I was so close." Instead, once you master these techniques you will be hearing, "Ooooh, God, I'mmm coming, Ooh! Fuck, Oooh! Ooooh! Oooooooh!"

Position Yourself for Success

Having intercourse in certain positions will help to last longer and prolong intercourse.

Positions that prolong intercourse:

The Woman on top positions, Spoons (side to side, man behind the woman).

The Medicine Man

Even though we already covered herbs and supplements earlier I would like to mention a few that are help to increase staying power. Supplements and Herbs for staying power: ? Amino Acid: L-Arginine: for erections of steel and increased volume of ejaculate and increased staying power. I take 500-1000mg in the daytime and 1000-1500mg about an hour or two before sex.

Warning: Do not take L-Arginine during a herpes break out or when cold sores are present, or any herpes related disease as it will make the case more severe.

I also recommend that you take a good amino acid supplement and augment it with the L-Arginine as not to create an imbalance in the body. I do not recommend taking high dosages on a daily basis for an extended period of time. ?

Herb: Schizandra: It is said to increase the volume of sexual fluids, increase sexual endurance and staying power and to strengthen the whole body. One Added benefit is that it beautifies the skin. Strongest in the tincture (Liquid in alcohol base) form. Should be taken on a daily basis according to the rules of Chinese tonic herbalism. MMO or Male Multiple Orgasm What is it? MMO or Male Multiple Orgasm is the ability experience all the sensations of orgasm without ejaculation, and therefore you can maintain an erection and have many orgasms without ejaculating, until you desire to ejaculate. Some men have developed or inherently possess this ability it seem while most other men can learn to develop this ability. The first prerequisite is a very strong PC muscle, so if you haven't developed your PC muscle yet, forget about MMO until you do. Secondly you need a high degree of ability with the PC Pump Technique. You should be able to stop your self from coming at the 9.5-9.9 levels. If not keep practicing until you can.

Once you can do that you must learn to stretch the duration of the sensations that you feel when you are applying the PC Pump Technique sensations.

A Technique for experiencing MMO:

Try the following technique during self-stimulation or intercourse.

1. When you get to a level of about 6.5 apply the PC Pump Technique Stop; Flex your PC muscle for several seconds, release. Take a deep breath and hold for a few seconds, slowly let the breath out and relax as your Excitement level drops a few points on the scale. Your erection may decrease a bit as well. Pay very close attention to what you are feeling as this happens. Start stimulating you're self again and repeat the above technique at levels 7.5, 8.5, 9.5, 9.6, 9.7, 9.8,
2. Now Try it at 9.9 and right before your P.O.N.R. flex your PC muscle hard, for as long as you can, take a deep breath and hold it for a few seconds, Open your eyes, and keep them open. Think of bringing the feeling up and through your whole body.
3. Now if you did all of the steps correctly and you did not pass your P.O.N.R. and your PC muscles was strong enough. You should have had a MMO without ejaculating, and you should still have an erection or partial erection and be able to resume stimulation.
4. If that's not what happened, then keep practicing and soon you will be a multi-orgasmic man.

Thrusting Techniques 101 Taoist Techniques and The Taoist 9 in 1 Technique

The Ancient Taoist had developed an extensive array of thrusting techniques for intercourse. They believed that the man should vary his thrusting speed and thrusting depth and thrusting angle in order to fully stimulate his lover and himself during a prolonged coition (Taoist also believed in prolong acts of intercourse and are famous for the term 1000 loving thrusts.) They also gave names to the different levels of depths in the vagina. They are as follows: 1.

1. Lute String, the depth of one inch inside.

2. Water chestnut Teeth, the depth of two inches.

3. Little Stream, the depth of three inches.

4. Black Pearl, the depth of four inches.

5. Valley's Proper, the depth of five inches.

6. Deep Chamber, the depth of six inches.
7. Inner Door, the depth of seven inches.
9. North Pole, the depth of eight inches.

The Taoist 9 in 1 Technique

The 9 in 1 technique is a thrusting sequence in which you simply thrust 9 times shallow (1 to 4 inches) and 1 time deep (3 to 5 inches, but not so deep as to hit her cervix and cause pain). Example of one set: Shallow Deep 1 9 2 8 3 7 4 6 5 5 6 5 7 3 8 2 9 1

Then you repeat the sequence over and over again varying the speed of the thrusts. It is said that this sequence will stimulate the woman to all nine levels The Ancient Taoists also describe nine different types of thrusts. I have endeavored to paraphrase from the overly poetic language used. The Nine type of thrusts:

1. Thrust to the left and to the right to stimulate the vaginal walls.
2. Thrust up and down rather than in and out. You have to move your whole body up and down do this in the missionary position.
3. Teasingly pull out and push back in.
4. Alternate between using deep thrusts and shallow teasing strokes.
5. Make deep and shallow strokes in steady succession.
6. Push in slowly.
7. Thrust Swiftly.
8. Poise at the opening, then strike swiftly and stay inside for a few moments.
9. Rise and then plunge low.

Tease & Please

In this technique you tease your partner with your penis until she is begging you to put it in her then you slowly enter her an inch at a time until you tease an orgasm out of her.

The Tease & Please Technique:

1. After your partner is highly aroused from foreplay, you gently rub your partner's clitoris with the head of your penis. Every once in a while tease the opening with the head of your penis. After a few minutes of this she will be simmering with desire, but you want her boiling so keep on teasing.
2. She will ask you to put it in! DON'T PUT IT IN YET! Keep teasing and talk to her. Tell her how beautiful her pussy is. Ask her if she wants you inside her or if she want's you cock inside her. Ask her how badly she wants it as you keep teasing her. After a few more minutes of this she will be on the edge of her seat and almost boiling with desire.
3. When she really can't stand it any longer, start rubbing the opening with the head of your penis for about a minute or so. Then slide only the head in and vary slowly thrust in and out with only the head of your penis. She will be begging for you to put it in more!
4. Slide it in one more inch, then trust slowly in and out but only to this same depth. Keep talking to her while you do this. Ask her if she likes your cock inside her, tell her how much you like fucking her and how good her pussy feels.
5. After a couple more minutes slide it in one more inch and then thrust slowly in and out to this same depth.
6. Repeat step 5 until you are almost at your full length, but don't put it all the way in until she starts having an orgasm.
7. Once she starts having an orgasm you may start thrusting more vigorously and or move on to a different technique.

Slide and Glide

This one I originally learned form an uncle of mine who told me of this great technique he used to give women orgasms during intercourse that had never had one during intercourse before. A few years later I saw that a book (by the title of "The Perfect Fit" had been written about a very similar technique, but with much fluff added to fill up 100 or so pages. This technique relies on stimulating your partners clitoris with the friction and pressure from your upper pubic region (right above your pubic bone) which we will call the Friction Zone (Figure 3).

The Slide and Glide Technique

The technique is done in the missionary position (there is a Woman on top variation that I will go over later). Make sure your partner is well lubricated, and I would recommend starting with the tease & please technique, until you are almost all the way in and then start do this technique.

The Slide and Glide Technique:

1. In the missionary position, make sure your partner's clitoris and upper vaginal area is well lubricated. (With her own juices, you saliva, Astroglide, Wet, etc.)
2. Ask the woman to spread her vaginal lips with her hands, when she does this put your penis in up to the base and rest the Friction Zone on her clitoris.
3. Put your weight on her body, and reach down and grab her ass and spread the cheeks apart.
4. Now start sliding up and down on her (not in and out, your penis should remain in completely inside her all the way to the base as you move. To do this you will need to grab her shoulders or the edge of the bed with both hands and push off with your toes as well. As you do all of this make sure that the greatest friction between you and her is where the Friction Zone and her clitoris meet. This might all sound really complicated but it is actually very easy, and after a few minutes you and her will be gliding back and forth on a sweet layer of sweat.
5. Continue until she has at least one orgasm. Keep moving and try not to break the friction.

How to Screw Her Good!

If you follow the techniques above you will be a good lover but you want to be a Great Lover so here is the icing on the cake. Many men just thrust in and out over and over again, or worse just put it in and pound. While many women do like to be pounded on occasion or after they have warmed up with an orgasm or two, the same thing over and over again can get quite boring. It is best to vary the techniques that you use and to vary the types, depth, speed, and angles of your thrusts as well as the positions that you are thrusting in. Just as well don't get carried away and keep changing positions every couple of minutes if your partner really enjoys the one you are in and is getting the stimulation that she needs for an orgasm. To be a great lover you have to learn to read your lover adapt and go with the flow and still be able to take the lead. You need to learn the way of your lover, what she desires and what she does not desire, what spots get her off and what really turns her off. These things come with time. That is why the sex should get better the longer you are with someone not worse..

A few Suggestions:

1. Always tease a bit and make sure that your lover is fully aroused and lubricated before penetration.
2. Make sure your lover is highly aroused and almost coming before full penetration.
3. Thrust at different angles in the same position to stimulate all the walls of the vagina. Try riding high and low, left and right in the same position to stimulate all of her vaginal walls.
4. Try different positions, variety is the spice of life.
5. Thrust at different speeds, fast, slow, and medium.
6. Thrust hard, soft and teasingly.
7. Once in a while pull out and re-enter.
8. Try thrust in a winding circular motion going in and coming out.
9. Put your penis all the way in and slide up and down and left and right and in circles clockwise and counter-clockwise, without moving your penis in and out.

Making it Bigger: The Penis You Always Wanted

We all ask the question does size matter? Sure it does, If you are too big she won't sleep with you! There are some women that only like big cocks and there are some that don't like big cocks. I personally have run in more of the latter than the former. According to the famous East Indian love text the KAMA SUTRA both men and women come in three sizes, essentially: Small, Medium and Large. And the most important thing is for them to fit well together. A small man with a large woman is not a good match, she will not get the stimulation they need and vice versa A large man with a small woman also is not a good fit as it will be painful for her or she may refuse intercourse all together. Visually, a larger penis turns on some women (But not as many as men who are turned on by having a larger penis) Most women like medium to big cocks in general, but not huge cocks, they are actually afraid of them.. Also you have to realize that a woman's interpretation of medium and big are different than ours. Most women think big is 6-7 inch and about 5 inches around and we seem to think that big is 8-9 inches and 6-7 inches around. Women also seem to favor thick or girth over length, a thicker penis will stimulate the woman more by stretching her vaginal walls and creating more friction. While men seem to be mostly preoccupied with length. Let me say that being a Great Lover does not have much to do with penis size. You can have a big cock and be a lousy lover or you could have 4 1/2 inches and be a Great Lover.

What makes a great lover is the feeling and passion that you channel through great sexual technique. A great lover is more than a penis and knows how to use his eyes, his voice, his words, his tongue, and his whole body as well as his penis. If you just happen to have a big cock, so much the better. Before I go on to the enlargement techniques, I would like to point out the advantages and disadvantages of having a larger penis. The Advantages of Having a

Larger Penis: ? Increased self-confidence and self-esteem. ? Visually more of a turn on to your lover. ? Looks good in the locker room. ? Looks good in your pants. ? May stimulate your lover's vagina more. The Disadvantages of Having a Larger Penis: ? If your penis is very big (8+ long, 6.5+ around) some women may refuse you intercourse. ? If your penis is very long (8+ inches), it will hit the woman's cervix and cause pain, so you will have to thrust more carefully and not go all the way in. Part of your penis (the first couple of inches) will get left out in the cold. ? If your penis is very long you will rarely get deep throated. If it is very thick it will be hard for most women to put your penis in their mouths. And if they can you may get hit by there teeth, if they don't know what they are doing. ? If you are a fan of anal sex, the bigger you are the less chance you will have of getting a woman to try it. ? If intercourse is difficult for your partner because of your size, you may have sex less often. Now that you know the long and short of it, Let's move on to making it bigger!

YES! YOU CAN MAKE YOUR PENIS BIGGER!

You may have ask the question can I make my penis bigger and depending on who you asked you might have gotten back "No" or vague or unsatisfactory answers or worse. Maybe someone looking to profit from desperat individuals looking for an answer has even taken you advantage of. There are even mail order companies that sell creams that claim to enlarge your penis or that advertise "add three inches to your penis over night, with a prosthetic enlargement device" making money off of people's ignorance of the word "prosthetic", which means artificial replacement. So they sell you a fake penis that fits on top of yours! How many people do you think will complain to the Postmaster General that the Penis Enlargement Cream didn't work!

Like I said in the Introduction of this manual, Yes You can enlarge you penis if you are willing to make the commitment to do the proper techniques on a regular and/or daily basis for an extended period of time. If you are willing to make this commitment you can make significant gains in the girth and length of your penis.

The minimum amount of time that you should consider is six months, however you will start to see gains before that (individual results will vary). It's like any other personal development or skill that you learn, if you want a Black Belt in the martial arts, it may take you 2-8 years depending on the style, If you want to get muscle and look like a body builder it may take you a 6-2 years. If you want to have the penis you always dreamed of and see results along the way, it may take 3 months -2 years. So in all of the above cases you can either bitch about how long it will take and give and quit or you can make a commitment to your goal and do a little work toward it every day and be for you know it you have reached your goal and seen results along the way.

Warning:

Because no two people are a like and you may have special needs, all penis enlargement techniques should be done under the supervision of a licensed Physician or Urologist. Penis Enlargement Techniques There are many different techniques to add both girth and length to your penis. Some of them you might appeal to you and others might not. It also depends on what your goals are.

Before we go any further go get a tape measure

(The kind used in health clubs and my tailors and a ruler. Now measure your penis first in the flaccid (soft) state by putting the ruler on above your penis flat against your pubic bone or the base of your penis and record the measurement. Next take the tape measure and wrap it around your penis and record that measurement. Now stimulate yourself until you are as hard as you can get! If you are not as hard as you can get your measurement will not be accurate. Now repeat the measurement process as described above and record the measurements on one of the sheets provided at the end of the manual. You can check as often as you like during the program, but I recommend that you only record on the sheet every month, as day to day measurement will fluctuate.

Now that you have your measurements let's how you measure up to the average?

Erect Length: Erect Girth: Small - less than 5" Less than 4 3/4"

Circumference Average 5" - 7" 4 3/4" - 5 1/2"

Circumference Large 7" - 9" 5 1/2" - 6 1/2"

Circumference Huge 9"+ over 6 1/2"

So where do you fall on the chart? Now that you know how big you are and what is average, you need to decide how big it is that you want to be? As with anything in life set reasonable goals for your self. If you are 4 inches don't set your self a goal of 10 inches in length. I am not going to say that it is impossible, but a more reasonable goal would be six inches if you starting with 4. For length I would recommend that you go no greater than 2" from where you are now. Try that out for a while and if you want more than continue with the techniques. Also as for girth same rules apply, however it is much easier to gain girth if you are using the Hyperemiation technique. Again set reasonable goal and besides anything over 6 - 6.5 in circumference is really BIG!

Methods of Enlargement

There are many methods and techniques of penis enlargement, some focus on lengthening the penis, others focus on thickening the penis, and some do a little of both. We are not going to cover all of the available techniques out there, but rather the ones that we have found most beneficial and proven.

Hot Compresses or Warm Water Soaking

Before any of the other techniques, this one should be done first, as it will help to expand the blood vessels in the penis and increase the flow of oxygen fresh blood in the penis, preparing it for the following techniques. Now for the first step, either:

- 1) Wrap your penis in a washcloth filled with warm water.
- 2) Get in the bathtub and run warm water over your penis by putting your penis under the faucet (test the water first with your hand, so you don't burn your self).
- 3) Soak In a Warm Bath. Do any of these for 5-15 minutes. This will help to expand tissues of the penis and bring in more fresh oxygen rich blood. After this step you penis will have a pink hue and be slightly swollen.

Manual Techniques The Jelq Technique or Milking the Penis

The Jelq technique is an ancient method of penis enlargement from the Middle East. Traditionally it was taught father to son when the child reached adolescence. In wealthy families the as the boy grow older he may be sent to a "Mehbil" a gym or health club where a highly-train attendant will perform the Jelq technique on the boy on a daily basis and as a result of these daily treatments his penis grow to dimensions that it would not have attained had he not used the technique. This technique also works on the fully developed adult penis as well. The Jelq Technique:

1. Start with flaccid penis; put some oil or lubricant on your hands and penis.
2. Grip your penis with an overhand grip with your thumb and index finger.
3. Squeeze gently and milk your penis down to the head, stretching your penis as you go. When you get to the head start the movement over with the other hand.
4. Do the technique over and over again for 30 minutes alternating each hand as you go.

If you start to get hard or feel the urge to ejaculate stop and wait until it passes and your erection subsides a bit and then continue, as this must be done with a semi-hard penis for it to work. Tip: Make sure that you have more than enough lubricant on your hands and penis. The best lubricant I have found is Albolene liquefying cleanser, which can be found in the cosmetic section on most drug stores. Women use it for removing makeup, but is also makes a great sexual lubricant(oil based, do not use with condoms ever during sex). This product has been used in the porn industry for years.

WARNING: You should use a moderate grip only. If you squeeze too hard you could cause bruising and or rupturing of superficial blood vessels on and near the surface of your penis. If after doing the technique you see any red blotches or dots you used to tight a grip have ruptured some superficial blood vessels and should wait until they heal (Approximately 24-48 hours) before applying this or any other enlargement technique. You should do this 5-7 days a week for 30 minute each time. Don't squeeze too hard as you could bruise your penis. This techniques has worked for many men, but it may take up 6 months before you see any noticeable difference and most men will give up after 4 - 6 weeks. What you are doing is forcing more blood into the corpora cavernosa (spongy tissue of the penis) and over time they will stretch and grow to allow more and more blood to fill the area, and henceforth you penis thicker. The technique also over time stretches the tissues of the penis as well as the suspensory ligament, which will help to lengthen the penis.

The Stretch Technique

The stretch technique is basically what it sounds like. By stretching the penis 6 to 12 times a day you help to lengthen the suspensory ligament and tissues of the penis which will help to lengthen the penis over time. Dr. Walter Schlesinger M.D. first made a similar technique popular in his book titled "Penicure, the Manhood Miracle". The Technique:

1. Your penis should be flaccid to slightly semi-hard.
2. Grip the head of your penis with your thumb and first three fingers, with an over hand grip, the middle finger should wrap around just below the head of the penis.
3. Gently and slowly stretch you penis as far as it will stretch without any pain or discomfort. Hold for 15-30 seconds.
4. Repeat step 4 several times each session.

You should do this technique several times a day i.e. after urination, a hot bath, a shower, before bed, or any other occasion that you have access to your penis.

Taoist Exercises

The next couple of exercises are ancient Taoist techniques for giving the penis a more pleasing mushroom shape and to produce harder erections. Both of these are done with an erection. The first one is optional if you like the shape of your penis.

Technique #1:

To Reshape the Penis This first technique is designed to give the penis more of a mushroom shape and make the head larger which is said to heighten pleasure for the female partner during intercourse.

1. Stimulate your penis until you have a very firm erection.
2. Grip the shaft of your penis with an underhand grip.
3. Squeeze firmly (but not hard enough to cause pain or to bruise your penis).
4. Slide your hand up to the head, as if forcing blood into it. It is like a milking motion. You should see the head expand and darken. Hold for a few seconds, then release.
5. Repeat step 4 for 2-3 minutes.

Technique #2: To Strengthen the Penis and Produce Harder Erections

1. Stimulate your penis until you have a very firm erection.
2. Grip the shaft of your penis with an underhand grip.
3. Squeeze firmly (but not hard enough to cause pain or to bruise your penis). Hold for a few seconds, then release. Repeat step 3 for 2-3 minutes.

Techniques That Require Added Equipment Hyperemiation or Vacuum Pumping

No doubt you have seen a vacuum pump be sold in the back of a men's magazine or in a sex shop hanging on the wall and thought to yourself "I wonder if it really works?". Maybe you have even bought one and tried it with little or no success. I am sure that many men have. I bought several and threw them out when they did not work for me! Vacuum pumps do work for some men, if used correctly and diligently over time. The problem is the lack of information and instruction that comes with the pump itself. In fact if you use the pump in the wrong way you could actually injure your penis! I know of many people including myself who have used Hyperemiation and vacuum pumping to increase the thickness and length of their penises with good results. It seems that an increase in thickness results much more rapidly than in length. So if you are mostly interested in girth as that is what most women prefer, then this is the technique that I would apply first. There are a lot of Vacuum Pumps on the market today and some are just plain junk others are very well made. You should get the best that you can afford the prices range from \$20.00 to \$300.00 for an electric pump version, with a good pump usually costing about \$75.00. If this is out of your budget you may opt for one of lesser quality and price. What ever the price, you should get one that has hand pump with a pressure release valve on it that will allow you to release the vacuum at will. There are some models on the market that have a hole on the clear plastic chamber that you have to put your finger over for the vacuum to work. I found it to be almost impossible to pump and cover the hole at the same time; therefore I would avoid this type of pump altogether. Also you don't want a pump with a chamber that is too large for you. The chamber should be 1/4 inch to 1/2 inch bigger around than your erect penis, but not big enough for the chamber to cover or go over your scrotum. What actually happens when you use a vacuum pump is that as you apply the vacuum to your penis, the outer skin of your penis expands outward toward the walls of the cylinder as this happens the deeper spongy tissue of the penis (the Corpora Caverosa and the Corpus Spongiosum) expand and fill with blood and lymph fluid as they are being stretched by the vacuum pressure. As the process is done over and over again for several months the spongy caverns expand to a new larger size to accommodate the blood and lymph. That is how the penis becomes larger.

The Vacuum Pumping Technique:

Things you will need:

1. A quality Vacuum Pump with a pressure release valve.
2. Pumper's Lube or some other water based lubricant, such as Wet, Probe, or Astroglide.
3. A tape measure.
4. A towel to clean up any spilled lube and to wipe off afterward.

The Actual Technique:

1. Now move to a comfortable position, preferably sitting up or at a 45-degree angle. Generously lubricate the base and opening of the pump where you insert your penis.

2. Lubricate your penis with the water-based lubricant and stimulate your penis until your penis is either semi-erect or hard. And measure it with the tape measure, both length and girth or circumference.
3. Insert your penis all the way into the clear chamber and close the pressure valve.
3. Now this is where 90% of all men screw up. You want to create only a moderate vacuum. If you over pump and create too strong a vacuum you could burst blood vessels or cause lymph blisters on your penis. So you might be asking, "how do I know what a moderate vacuum is?". Here is a way that I have found to work. First start pumping slowly until your penis stretches and expands to its limit. The way you know the limit is that 1) it will feel uncomfortable. 2) Your Penis will not stretch much farther. If your semi-hard when you do this, you will see your penis stretch, however if you are rock hard you might not even see it stretch.
4. So when you have found your limit and it seems a bit uncomfortable, release some of the pressure from the release valve, until you are at a pressure that is comfortable, yet you still feel a stretch.
5. Keep continuous a vacuum on for 30 min. After 30mins. you should release the pressure completely, take your penis out and measure it. If there are not any noticeable gain, you have not pumped long enough.
6. Massage your penis and area around the base gently for a minute, then you may either stop keep pumping for another 30 minute session. I recommend that for the first month you take it easy and just do 30 minutes a day 5-7 days a week. After that you might want to pump for a longer duration of 45 minutes - 1 hour or so. I have heard of men pumping for up to 3 hours. I personally have never gone over 1 hour myself.

The key seems to be a balance of vacuum pressure and time. The longer the better with a moderate pump. The greater the vacuum pressure the greater the risk of injury and blisters. You will have to find the right balance for yourself, where you have adequate pressure for a duration of time 30 minutes - 2 hours, that will give you the greatest gain without any injury. If you do plan to go over an hour which I have never done and don't recommend, be sure to take 3-5 minute break every 30mins. To allow fresh blood into the penis. Tip: I have found that the Vacuum Pumping Technique is more effective if the penis is erect during the session. While you will not be able to maintain an erection through the whole session, I believe that you should start that way, and try to maintain it for as long as possible. To aid in this I recommend that you view some erotic material during the session, i.e. an erotic magazine or video. Also if you use the supplement L-Arginine an hour or so before the session you will stay hard much longer.

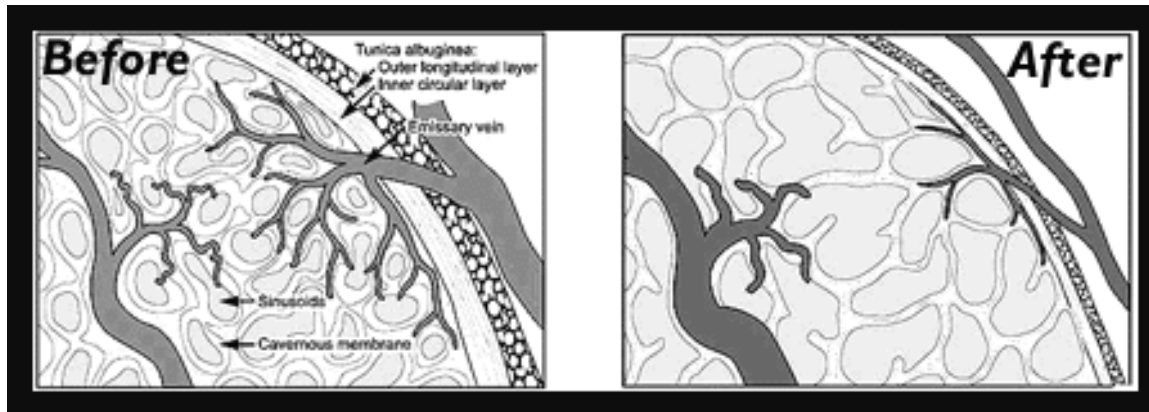

I have also have had good results by using the maximum SAFE and COMFORTABLE (it should not hurt or burn, if it does the pressure is too great) pressure for a duration of 30-45 minutes while sustaining an erection. It seem to work on the deeper tissues of the penis more, when you have an erection as opposed to the external skin with out an erection.

Repeat this technique on a daily basis 5-7 days a week if possible.

Now for the warnings.

WARNING: Use Only A moderate Vacuum Pressure!

1. Do not use too great a vacuum or you could burst blood vessels.
2. If you feel any pain immediately decrease or completely release the vacuum pressure. You do not want to injure your penis! It's better a small penis, than one that is damaged.
3. In some cases a side effect of pumping and over pumping is that, the opening of the penis gets deformed or changes shape a bit and when urinating the urine will come out in a spray instead of a stream. If this happens, stop pumping for (24-48 hours) and see if it goes back to normal. If it does return to the normal state and you still desire to use pump technique, use a lesser vacuum pressure. If you y still experience the side effect you will have to determine if you want to continue with the technique altogether. But as I said before this is generally a result from over pumping with too much vacuum pressure and or pumping too often.
4. After your pumping session examine your penis and see if there are any tiny red dots or red blotches. If you only see tiny red dots, you are using too great vacuum pressure and have broken tiny superficial blood vessels in your penis, which is for the most part harmless but overtime could give the penis dark hue over the affected area. If you find any larger red blotches you should discontinue use of the Hyperemiation treatments and any other techniques until they completely heal. If there is any severe pain you should seek medical attention.

The Program

I am going to share with you a program for penis development and enlargement that has worked for many men including my self. The expected results are to gain about an inch both length and circumference over 6-8 months. Individual results will vary depending on how faithful to the program you are, your body structure, and how regularly you do the program. The program should be done 5-7 days a week. I think you will also benefit from taking the supplements discussed earlier in the manual for producing harder erections, because if you are not as hard as you can get you are not as big as you can get.

The Program:

The following Techniques should be done 5-7 days a week.

The Program contains three parts, two of which can be done at different times of the day or all at the same sitting.

Part 1 1. Do the hot compresses for 5-15 minutes, The closer to 15 the better!

2. Do the Jelq Technique for 30 minutes.

Part 2 1. Do the hot compresses for 5-15 minutes, The closer to 15 the better!

Do the Hyperemiation treatments for 30-60 minutes with a 1 minutes break and massage of the penis at 30 minutes to allow fresh blood to enter the penis.

Or At One Sitting

1. Do the hot compresses for 5-15 minutes, The closer to 15 the better!

2. Do the Jelq Technique for 30 minutes.

3. Do the Hyperemiation treatments for 30-60 minutes with a 1 minutes break and massage of the penis at 30 minutes to allow fresh blood to enter the penis.

Part 3 1. Do the Taoist Techniques #1 and #2, upon rising in the morning on your morning erection, or any other time you have a strong erection.

2. Do the Stretch Technique whenever you urinate or any time that you are nude and your penis is flaccid. 10-12 times a day.

Attitude and Belief

Your attitude and belief regarding the techniques presented in this manual are just as important as the actual techniques themselves. I am not saying that if you don't believe that they won't work at all, but they if they still do the results wont be a great as if you did believe in them. This is the same principal that applies to patients in hospitals who should respond to the medicine should recover and don't because they just give up or don't believe that the treatment will work. Like wise there are those who are given up on and make full recoveries, despite the odds! They same applies here, if you use these techniques with the attitude, "It won't work for me, I never be able to last all night long! Or "This is bullshit I am stuck with a 5 1/2 cock forever!" the results will respond accordingly. How can you expect great success when you are planning for failure! The attitude you need to have is that it will work and, "I have a BIG COCK!" and "I can last ALL NIGHT LONG!" Say it now! SAY IT OUT LOUD! And believe it. I am going to share with you the key to success in anything! "What ever it is you want you have to feel as though you already have it!" Read it Again. "What ever it is you want you have to feel as though you already have it!" What this means is that if you want a big cock you have to feel as though you cock is already big. If you look down a feel
